Increase performance and scalability of cluster computing

Intel® Cluster Toolkit 2011 provides a basic package of Intel cluster tools that help you develop, analyze, and improve performance for MPI applications on Linux* and Windows* OS based HPC clusters.

Features

Basic Tool Suite for MPI

• The Intel Cluster Toolkit license provides access and support for the following programs on either Windows or Linux:
  • Intel® MPI Library 4.0 Update 1
  • Intel® Trace Analyzer and Collector 8.0 Update 1
  • Intel® Math Kernel Library 10.3 Update 3
  • Intel® MPI Benchmarks 3.2.2

Easy Installation and Updates

With a valid product serial number for Intel Cluster Toolkit, you can register and/or login to the Intel® Software Development Products Registration Center (https://registrationcenter.intel.com/) and download the package and updates for one year from the date of purchase.

Featured Products

All the software tools included with Intel Cluster Toolkit have undergone a minor revision to give you high performance development tools and performance profiling tools for cluster software development with MPI. The following list contains just a few of the many new features included in this latest version:

Intel MPI Library 4.0 Update 1

Intel MPI Library 4.0 update 1 provides new levels of performance and flexibility for applications that execute on clusters of Intel® platforms. The library achieves these advantages by improved interconnect support, faster on-node messaging, and an application-tuning capability that adjusts to the cluster architecture and application structure. This library features multirail InfiniBand® (IB) support and enhancements to the native IB layer for lower communication latencies. In addition, the library maintains compatibility with previous Intel MPI 3.x versions,
while providing an enhanced library architecture that enables
interconnect vendors and Intel® processors to better expose their
future maximum performance and functionality.

Intel Trace Analyzer and Collector 8.0 Update 1
Intel Trace Analyzer and Collector 8.0 Update 1 is enhanced with new
features that accelerate the analysis and tuning cycle of MPI-based
cluster applications and enables programmers to analyze the effect of
advanced interconnects on application performance. The Intel Trace
Analyzer and Collector 8.0 Update 1 load imbalance diagram and the
ideal interconnect simulator help MPI programmers identify further
optimization opportunities.

Intel Math Kernel Library 10.3
Intel Math Kernel Library 10.3 (Intel® MKL 10.3) is a library of
highly optimized, extensively threaded math routines for science,
engineering, and financial applications that require maximum
performance. Core math functions include BLAS, LAPACK, ScalAPACK,
Sparse Solvers, Fast Fourier Transforms, Vector Math, and more. Intel
MKL version 10.3 is a revision and offers support for Intel® Advanced
Vector Extensions (Intel® AVX), C extensions for LAPACK and
PARDISO, Summary Statistics Library, and enhancements to several
routines like DGEMM, FFTS, and RNGs.

Intel MPI Benchmarks 3.2.2
Intel MPI Benchmarks 3.2.2 provides:

- Support of large message buffers greater than 2 gigabytes for
  some MPI collective benchmarks (e.g., Allgather, Alltoall, Gather, and
  Scatter) so as to support large core counts

- New Intel® MPI Benchmark executable command-line options
  “-include/-exclude” to better control execution of the benchmarks
  list. Use these options to include or exclude benchmarks from the
default execution list.

- New benchmarks PingPongSpecificSource and PingPingSpecificSource.
The exact destination rank is used for these tests instead of MPI_
ANY_SOURCE as in the PingPong and PingPing tests. These two
tests are not executed by default. Use the “-include” option to enable
execution of the new benchmarks.

Support

Every purchase of an Intel® Software Development Product includes one year of support services, which provide access to Intel® Premier Support and all product updates during that time. Intel Premier Support gives you online access to technical notes, application notes, and documentation.

Intel® Software Development Products

Intel Software Development Products help you develop high performance applications by offering a full suite of software tools:

- Intel® Cluster Studio 2011
- Intel® Parallel Studio XE 2011
- Intel® Composer XE 2011

Visit our website at www.intel.com/software/products for details about our entire line of software products.

Optimization Notice

The Intel® MPI Library contains functions that are more highly optimized for Intel microprocessors than for other microprocessors. While the functions in the Intel® MPI library offer optimizations for both Intel and Intel-compatible microprocessors, depending on your code and other factors, you will likely get extra performance on Intel microprocessors.

While the paragraph above describes the basic optimization approach for the Intel® MPI library as a whole, the library may or may not be optimized to the same degree for non-Intel microprocessors for optimizations that are not unique to Intel microprocessors. These optimizations include Intel® Streaming SIMD Extensions 2 (Intel® SSE2), Intel® Streaming SIMD Extensions 3 (Intel® SSE3), and Supplemental Streaming SIMD Extensions 3 (Intel® SSSE3) instruction sets and other optimizations. Intel does not guarantee the availability, functionality, or effectiveness of any optimization on microprocessors not manufactured by Intel. Microprocessor-dependent optimizations in this product are intended for use with Intel microprocessors.

Intel recommends that you evaluate other library products to determine which best meets your requirements.
